PROFESSIONAL SUMMARY

AI-focused Python developer and CS undergraduate with hands-on experience building production-grade AI systems — including RAG pipelines, multimodal LLM integrations, and semantic search engines. Proficient in Python, FastAPI, and the full GenAI stack (Gemini 1.5, sentence-transformers, vector databases). Proven ability to deliver real-world, measurable solutions independently, with a high learning velocity and strong engineering ownership.

TECHNICAL SKILLS

Languages: Python (Primary), JavaScript

AI / ML: Gemini 1.5 (multimodal LLM), RAG Pipelines, Sentence Transformers, Vector Embeddings, NLP (TF-IDF, Cosine Similarity), LLM Integration

Backend: FastAPI, Django REST Framework, Node.js, REST APIs, JWT Authentication

Frontend: React, Next.js, Tailwind CSS, HTML5, CSS3

Databases: Vector DB (Endee), MySQL, MongoDB

Tools & DevOps: Docker, Git, GitHub, Postman, VS Code

EXPERIENCE

Web Developer Intern — Atechnocrat Web Solutions Pvt. Ltd., New Delhi

Jan 2026 – May 2026 | 4 Months

- Contributed to server-side logic and API integrations on back-end development tasks.
- Performed open-source customizations, adapting third-party tools to fit project requirements.
- Generated structured data summaries and internal reporting outputs.

PROJECTS

COGNIFI – Full-Stack AI Expense Dashboard | Next.js, Django REST Framework, FastAPI, Gemini 1.5, Tailwind CSS

- Architected a financial SaaS platform with dual-backend design — routing CRUD to Django and ML inference to FastAPI — from a single React frontend.
- Integrated Gemini 1.5 (text + image multimodal) to fully automate expense entry via an intelligent AI financial assistant.
- Secured APIs with JWT authentication (DRF) for per-user data isolation; designed Glassmorphism UI with drag-and-drop receipt scanning and live charts.

VIBECHECK – AI-Powered Semantic Search Engine (RAG Pipeline) | Python, Gemini 1.5, Sentence Transformers, Endee DB, Docker

- Built a production-grade RAG pipeline with a Dockerized C++ vector database (Endee) to store and query LLM embeddings locally, eliminating hallucinations.
- Engineered semantic similarity search via sentence-transformers to power an AI recommendation engine — directly applicable to enterprise AI acceleration.
- Implemented fault-tolerant exception handling for continuous uptime during database connectivity drops.

Smart Resume Analyzer – NLP Backend Application | Python, FastAPI, NLP (TF-IDF, Cosine Similarity), REST APIs

- Built a text similarity engine using TF-IDF and cosine similarity to score resumes against job descriptions — demonstrating applied NLP for real-world use.
- Designed a modular FastAPI backend (routes, services, processing logic) with endpoints for upload, parsing, scoring, and structured feedback.
- Extracted structured data (skills, experience, education) from PDF/DOCX via custom file-handling pipelines.

CERTIFICATES & ACHIEVEMENTS

- Smart India Hackathon (SIH) – Team Lead: Architected a Student Dropout Record System web app for the Government of Gujarat to track at-risk student data.
- Tata GenAI Data Analytics Job Simulation: Analyzed customer datasets and built AI-assisted insight reports using generative AI tools.
- Full Stack Web Development – GeeksforGeeks: Certification covering modern frontend and backend web technologies.
- Machine Learning – Coursera: Foundational ML concepts including regression, model evaluation, and data processing.

EDUCATION

Bachelor of Technology in Computer Science

Uttaranchal University, Dehradun • CGPA: 7.5

2023 – 2027
